

# BREAST CARE - LOCALIZATION NEEDLES

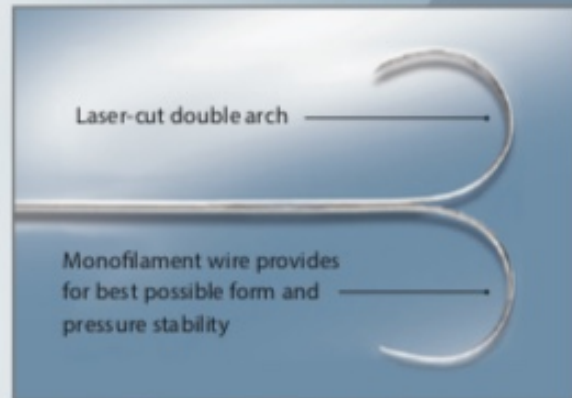

## Tuloc®

The best repositional breast localization needle available

**Tuloc®** is intended for the pre-operative marking of non-palpable, suspicious breast lesions and facilitates intraoperative localization for the surgeon.

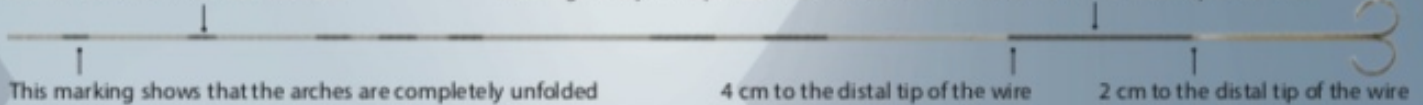

### Features Tuloc® and Tuloc® Premium

- Repositionable localization wire
- High rigidity and pressure stability of the wire and the needle
- Distal depth markings show information on the distance to the tumor
- Extreme sharpness for precise and atraumatic puncture
- Optimal visibility under ultrasound and good palpability during the operation

This marking indicates that the arches are still inside the cannula

Markings every 2 cm provide information on the distance to the distal tip of the wire

## Tuloc® Premium

For easy, single-handed operation

Tuloc® PREMIUM allows the user to localize and place the wire safely with one hand, while simultaneously guiding the ultrasound transducer in the other.

Unique fixation "horseshoe"

Provides for secure pre-operative fixation of the wire to skin level without tape.

Manufactured by SOMATEX®
